ABOUT

I am a UX Designer with a professional background in industrial design, entrepreneurship and design research. I utilize design to make things work for over 10 years. I adopt a comprehensive approach that involves actively understanding the business model, exploring the relationship between value proposition and product, and strategically implementing design interventions to enhance the user experience.

FEATURED SKILLS

Activities

- Vibe-coding UX improvements - branching from source, implementing small fixes, and shipping them via pull requests with Claude
- Running AI batch-processing pipelines - e.g. generating and refining hundreds of production-ready icons at scale
- Gathering and evaluating requirements in collaboration with stakeholders.
- Planning and executing diverse research methodologies.
- Designing user flows and assessing their feasibility with stakeholders.
- Sketching ideas, developing wireframes and prototypes.
- Designing user interfaces ready for development.
- Establishing and maintaining design systems
- Leading team-wide and company-wide campaigns, including data-driven decision making and the implementation of the atomic design approach
